VistaDraft app deployment options

Deployment option	ClickOnce VSTO installer	SCCM & Active Directory	Managed
Application residency	on-premise	on-premise	off-premise / on VD* managed dedicated server from Amazon AWS
Data residency	on premise / local drive	on premise / local drive	Amazon AWS / remote drive
Most suitable when	user installs VD* app manually without Admin password or internal IT	internal IT installs apps centrally to user lists in Active Directory	user accesses VD* app on remote server via Remote Desktop Connection a Citrix-like client
Advantages	updates & defect fixes auto-install to user PCs without internal IT	internal IT controls user lists that get VD* app installed	no installation & no coordination with internal IT required
Disadvantages	every user installs VD* app initially manually	VD* app updates & defect fixes managed by internal IT via SCCM	connection latency affects user experience data is off premise
